

Expense Bot

Expense Bot is web based application for entering claims for travel expenses and company expenses by employees.

Web user interface to provide simple data input for the processing expenses. The interface work as self automated portal and it is substituting to original way of inserting request for claims. The new interface provides better user experience, fast response and minimum data input in matter to process the request. In matter to join old and new world the RPA is in place to provide data to the end system – iPower and Lotus Notes. Within Lotus Notes there is Travel Calculator the local tool following local legislation for travel expenses and iPower the group platform used regionally.

The 'Travel expense' form includes fields for Expense for, Expense type, Expense date, Expense code, and Description. It also has dropdown menus for Ship line, Location, and Approval.
