

Creative thinking skills

Who is it for?

The training course is intended for employees who need to work through complex issues on their own.

What's in it for me and my company?

We all have different ways of thinking developed through either education or non-formal education, or we simply experience different states of mind. However, few people can boast that they can do a *100-meter sprint thinking*. This is not because people lack mental capacity, but because they have never trained their minds to do so. Just like opera singers develop their voice and singing skills through music education, or top-athletes rehearse specific movements to achieve top results, creative and critical thinkers work on improving their critical thinking abilities.

By developing alternative problem solving strategies we develop skills that will improve the performance of individuals, teams and organisations.

What will I be able to do after I receive training?

You will be able to:

- Apply creative thinking techniques
- Provoke “Eureka” moments when you get stuck in your own thinking
- Identify and correct common thinking errors that you and other people often make
- Learn the best approach to problem solving through critical thinking

What will I do and experience during the training?

You will:

- Practice the application of new creative thinking tools
- Adopt alternative problem solving methods
- Receive timely feedback on your work
